2 Merged Tier-1 PRs SQLGlot & LiteLLM · **16 Upstream PRs** FastMCP, CrewAI, MCP SDK · **8** LLM backends with failover · **100 s → 10 s** profiled latency fix

EDUCATION

Indian Institute of Information Technology, Kottayam 2024 – 2028 (expected)
B.Tech Computer Science & Engineering (Cybersecurity) | CGPA 7.9
6-Month Co-op Availability: Nov 14, 2026 – Summer 2026 | University NOC Approved & Academic Credits Eligible

PROJECTS

Upstream AI Runtimes & Infrastructure: FastMCP, CrewAI, SQLGlot github.com/Pyhroff
FastMCP (#6063) · CrewAI (#8240, #8242) · SQLGlot (Merged #8780) · LiteLLM (Merged #47091) · MCP SDK

- Toby Mao's SQLGlot & FastMCP: Shipped merged AST node isolation in SQLGlot (PR #8780, merged), preventing silent query corruption in lambda transpilation; authored host timeout and external callback limit in PrefectHQ/fastmcp (PR #6063, 65/65 tests pass) mitigating microVM starvation in CodeMode.
- crewAIInc/crewAI & LiteLLM: Authored cursor-paginated MCP tool/prompt discovery eliminating schema truncation (>100 tools, PR #8240) and preserved upstream execution context during guardrail validation retries (#8242); shipped merged Cohere stop-sequence mapping in LiteLLM (PR #47091, merged).

OSIRIS: Model-Agnostic Agent Runtime github.com/Pyhroff/osiris
Python · FastAPI · SQLite · Gemini / Groq / Ollama / 5 more providers · pytest · GitHub Actions

- Daily-use agent runtime with a provider router (8 backends, automatic failover with cooldowns), nine keyword-routed agent personas over ~40 tools with per-agent tool scoping, and Gmail / Calendar / Drive / GitHub / Discord integrations behind a FastAPI web UI.
- Long-term memory in SQLite using embeddings and cosine-similarity recall with a keyword fallback, plus session-to-memory reflection and a scheduler for reminders and routines.
- Benchmarked tool-calling on three local models (10 prompts, 15 tools incl. 5 distractors): qwen3 10/10, llama3.2 7/10, gemma3 0/10 (no tool support). Traced qwen3's latency to Ollama's OpenAI-compatible endpoint ignoring think:false, added a native Ollama adapter (100 s → 10 s) and reported one confusion that prompt fixes did not resolve. 100 tests pass.

Lucid: Grounded Housing-Support Assistant (USAII Global AI 2026) github.com/Pyhroff/lucid-housing-ai
Python · Streamlit · Groq Llama 3.3 70B / Gemini · Pydantic

- The LLM only extracts schema-validated facts from a user's story (any language); a deterministic rules engine over nine official programs makes the eligibility decision, and a faithfulness guard rejects fabricated links, numbers and guarantees.
- Two-layer eval harness that reports its own limits: 91% live fact-extraction accuracy, 67% injection recall and 75% scam recall on self-authored synthetic scenarios.

PromptStrike: LLM Red-Teaming and Evaluation Harness github.com/Pyhroff/promptstrike
Python · FastAPI · WebSocket · SQLite · GitHub Actions

- LLM-as-judge loop (JailbreakBench-style 1–10 rubric) running PAIR, TAP, Crescendo and GCG across Groq, OpenAI and Ollama targets, with a multi-model sweep and a CI gate that fails on attack success rate above a threshold; 61 tests pass offline.

SOC PARALLAX: LangGraph Investigation Pipeline github.com/Pyhroff/soc-parallax
Python · LangGraph · FastAPI · Neo4j · PostgreSQL · Ollama · Docker

- Deterministic pipeline (collect → baseline → map → correlate → narrate) with a swappable LLM provider; ATT&CK mapping comes from a versioned rulebook and a grounding guard blocks narratives citing anything absent from the evidence.

loopcheck and aisec-suite: Open-Source Agent Tooling github.com/Pyhroff/loopcheck
Python · Typer · pytest · GitHub Actions · PyPI

- loopcheck reads a JSON trace of a hand-rolled tool-calling loop and flags duplicate calls and thrashing, with estimated wasted cost and regression comparison for CI; 115 tests pass.
- Published aisec-suite 0.3.0, pyhroff-mcpaudit, memsentry and pyhroff-ragsentry on PyPI: one command runs all three scanners and emits SARIF, with AST reachability analysis and a structural tool-poisoning detector (48.1% held-out recall at 0.03% false positives on 3,974 real tool descriptions).

SKILLS

LLM systems tool calling, provider abstraction and failover, embeddings and cosine-similarity retrieval, structured output (Pydantic), LLM-as-judge evaluation, grounding and faithfulness guards, prompt-injection defence

Frameworks & APIs LangGraph, FastAPI, Streamlit, Playwright; Gemini, Groq (Llama 3.3 70B), OpenAI, Mistral, OpenRouter, Ollama (qwen3, llama3.2)

Engineering Python, JavaScript, SQL, Bash; SQLite, PostgreSQL, Neo4j; pytest, GitHub Actions, Docker, Git

CERTIFICATIONS, WRITING & HACKATHONS

TryHackMe AI Security path (Jun 2026); top 2% globally, 177 rooms completed. Fortinet: Introduction to the Threat Landscape (NSE 1).

Medium six articles on AI agents and their security, including a browser agent that knows when to stop for human approval.

Hackathons USAII Global AI 2026 (Lucid); PSBs Hackathon 2026 (PhantomGrid, behavioural-biometric authentication with Isolation Forest and DTW).
